# Build capacity to support new kinds of learning

Supporting the learning journey for teaching and professional staff

Positive Scenario

Students collaborate with staff.

All teaching staff can use our core systems to support effective learning

We have excellent digital learning resources & robust environment

All teaching staff are supported on a progression path to more advanced digital skills suited to their subject or role

We have a digital strategy group with staff & learners contributing to decision making, supported by research & working collaboratively with other successful case studies.

Teachers are encouraged to have a go, experiment & take risks

IT Students & IT Staff support Staff in training & development

Strong connections & working collaboratively with Employers.

Continuous Staff Development & Training

Teaching Excellence is rewarded

Negative Scenario

Learning resources are not digital

Students frustrated at lack of modern technology

Digital technology is not widely used.

SLOW

We do not partner with business to support our students with the right skills and employment opportunities.

Digital skills by both staff and students remain low

Staff are not encouraged to innovate or experiment with new tech

We are not using technology to enhance accessiblity and enable students to access personalised learning any time, any place and on any device.
