

Activity 4.4: Accepting trans identities as authentic – PDF format

Task:

For this activity, you are asked to select the extent to which you agree or disagree with four statements.

For each of the following, think about whether you agree or disagree. Your answers are for yourself and do not need to be shared. There are no right or wrong answers.

1. An 18-year-old who is genderfluid: she uses she pronouns on some day and he uses he pronouns on others.
2. A 60-year-old trans woman who has just come out: she has a history of having been in the army and her hobby is restoring classic cars.
3. A trans man who has medically transitioned and now has a flat chest and full beard: he likes to wear dresses and makeup.
4. A non-binary person who wants to medically transition with hormones and surgery: they are certain they are non-binary and require gender neutral accommodations, despite wanting a typically 'binary' medical transition.
