

Lecture 2: Hands-on-Exercise

Short written reflection (15 mins)

Purpose: This exercise asks you to use the concepts from Lecture 2 to reflect on the policy context in which your EMP modelling project sits.

You do not need detailed policy expertise. The aim is to demonstrate structured thinking, not exhaustive knowledge.

Identify the policy space by responding to these guiding questions:

- What specific policy area is your EMP project concerned with? (e.g. renewable energy expansion, energy access, energy efficiency, etc.)
- What types of policies or instruments are relevant in this area? (e.g. targets, regulations, subsidies, pricing mechanisms, planning frameworks)
- What problems are policymakers trying to address?
- What trade-offs are visible (e.g. affordability vs sustainability)?
